Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group I Figs 1-4 claims 1, 3, 4, and 7 in the reply filed on November 21, 2008 is acknowledged. Claims 2, 5, 6, and 8-16 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 3, and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Hermansson (WO02/061522).

Hermansson discloses a locking device comprising: an adjustable bracket (15) provided with a recess; a stationary contour (16) with a contact surface; a pin (23) arranged movably in said recess; a compression spring (31) generating an axial spring force applied to said pin, said pin having a pin head, which projects from said recess of said bracket and has a contact pair with said contact surface (see Fig 3); and a centering device (18) between said pin and said bracket, said centering device has having at least one elastically deformable ring (page 5 lines 4-23), which is arranged between said pin and said bracket within said recess (see Fig 3), is arranged displaceably within said recess, and has a surface (36) with a cross section tapering

against the direction of the force of said compression spring (taper is the same direction as applicant's invention, see Fig 3), said surface (36) of said centering device is in contact with a complementary surface at said pin (see Fig 3).

Re claim 3, said elastically deformable ring has at least one said slot (25), which is arranged axially to a longitudinal axis of said pin and/or said recess and partially severs said ring (see Fig 4).

Re claim 4, said tapering surface of said elastically deformable ring has a conical shape (38).

Allowable Subject Matter

4. Claim 7 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
